Is the Earth's Energy Budget Collapsed?

D.A. Malvekar; G.R. Katkar & A.L. Mirukhe

ABSTRACT

Industrial revolution has exploiting nature. Global warming is the leading cause of such activities. Greenhouse effect maintains a temperature suitable for living things to survive. Temperature rise is just the beginning. Greenhouse effect is naturally occurring phenomenon. It maintains a temperature suitable for living things to survive. The last decade (2011-2020) was the warmest on record. Rate of deforestation has increased. Human activities are responsible for increasing Green house gases in the Environment. These greenhouse gases have different global warming potentials.

Indian constitution points about duty of every human being to protect environment. The Paris Agreement aims to keep a global temperature rise this century below 2 degrees Celsius above pre-industrial levels. We must create a good natural environment which will maintain Earth's equilibrium.

Keywords: Environment, Global warming, Greenhouse gases, Paris Agreement.

Introduction

Good work begins with self and with self-motivation. I think celebrating environment day on 5th June is not enough at all. In 2019-20 when there was news coverage on the Australian bush fire, tears rolled down when I saw that animals who can't speak and failed to get out from that fire. I was shocked to hear that 18 million hectares burned in the Australian bushfire. In
